## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-32 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-32 of copending Application No. 10/090,930 in view of Paik et al. (6,242,127).

Copending Application No. 10/090,930 claims a fiber mat separator useful as an electrolyte reservoir in a lead acid battery wherein the fiber mat separator comprises an acid resistant metal impurity inhibiting amount of micronized porous organic polymer particles.

Copending Application No. 10/090,930 discloses the claimed invention except for specifically teaching that the separator is filled with silica.

Paik et al. teaches in column 5, lines 15-20, that silica is one of the primary materials used to form the separator.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include silica as a material used to make the separator because Paik et al. teaches that it is known to include silica.

This is a provisional obviousness-type double patenting rejection.

### ***Specification***

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

3. The disclosure is objected to because of the following informalities: Page 1, line 5, should not state that Serial Number 09/774,453 is now US Patent 6,511,775.

Appropriate correction is required.
